

Mathematics II

Due to coronavirus quarantine measures, the courses of Mathematics II will be held temporarily at distance, using electronic communication only.

Virus teaching regime:

- The primary communication channel is the email. We will contact you via your official email you have in KOS system. You may also use our email to contact us with anything related to our courses (asking questions, requesting extra study material, sending your completed homeworks).
- All the essential information and course materials will be published at this webpage. You will be notified of changes.
- A new, emergency communication channel for each course (subject) is set up at the university using [Microsoft Teams](#) platform. It can be used for *online chat-like communication with teachers during the usual course hours* according to standard schedule of the subject.

General study advices and rules for the emergency online study regime can be found in

Study advices

Essential weekly information for regular study

- Week: February 22 - February 28, 2021 - Topic: Functions of multiple variables
Functions of multiple variables
- Week: March 1 - March 7, 2021 - Topic: Partial derivatives, differentials
Partial derivatives, differentials
- Week: March 8 - March 14, 2021 - Topic: Implicit functions
Implicit functions
- Week: March 15 - March 21, 2021 - Topic: Extrema
Extrema
- Week: March 22 - March 28, 2021 - Topic: Double integral
Double integral
- Week: April 12 - April 18, 2021 - Topic: Triple integral
Triple integral
- Week: April 19 - April 25, 2021 - Topic: Line integral
Line integral
- Week: April 26 - May 2, 2021 - Topic: Potential fields
Potential fields
- Week: May 3 - May 9, 2021 - Topic: Surface integral
Surface integral

Assessment requirements:

The delivery of all sample exams (completely and correctly solved) is necessary condition for obtaining the assessment from tutorials. Sample exam tests:

Exam 1

Exam 2

Exam 3

DEADLINE: April 26, 2021 for the second part of the homework (3rd and 4th exercise from Exam 1, Exam 2 and Exam 3, except exercise 3 from Exam 1A and exercise 3 from Exam 3A)

Students who have passed in the first part of the homework should submit the second part by email to [Mgr. Hynek Řezníček](#) . All the other students (who failed in the first part) should submit the second part by email directly to [doc. Mgr. Ing. Tomáš Bodnár, Ph.D.](#).

The homeworks solutions will be delivered in three parts (by chapters). The deadlines will be set during the semester by the tutorials teacher. Students who will fail in any of the three parts of the homework will not obtain the assessment from tutorials (and can't participate in the exam).

Any homeworks that will either be incorrect, evidently just copied from someone else, or submitted after the deadline might be rejected. Please be careful, pay attention to your homework and deliver it in time, correctly solved and written.

For additional explanation, clarification and extra material contact the Lecture/Tutorial teacher by email or the [Microsoft Teams](#) platform for online consultation. You can post your questions and request anytime. The teachers will respond as quickly as possible. For *online live chat* use the *standard course hours* according to usual schedule. Ask for other extra consultations if needed. We will do our best to help you.

This course is intended for foreign students studying at our faculty and domestic students who registered for this subject in their study plan. Conditions and requirements for this course are almost identical to the equivalent course being held in Czech language.

Content:

Functions of several variables - domain, limit, continuity, partial derivatives, extrema, implicit function. Multiple integrals - double and triple integral, Fubini's theorem, applications Line integral, surface integral, Gauss theorem, potential.

in academic year 2020/2021

- Requirements - Level A(Alpha)

in academic year 2020/2021

- Requirements - Level B(Beta)

Lecturers

[doc. Mgr. Ing. Tomáš Bodnár, Ph.D.](#), Office: KN:D-303

- lectures: Monday, 10:45 - 12:15 and Friday 12:30 - 14:00.

[Mgr. Hynek Řezníček](#) , Office: KN:D-205b

- lectures: Wednesday 16:00-17:30 and Friday 16:00 - 17:30.

In the case of any problem (especially with assessments from tutorials, or with exams) contact your teacher.

Tutorials, assessments

Tutorials are obligatory. Assessment from tutorials (written in the study record) confirms *student's presence and activity* at the tutorials and elaboration of homework and tests. Assessment is a necessary condition for the exam. (I.e. student can make the exam only with the assessment written in the study record.) The *assessments from tutorials obtained in previous years are not accepted*. Student has to obtain the assessment again. The assessments are written in the last semestral week, not later than one week after. Exceptions are possible only with the explicit agreement of the chair of the institute.

Exams

The exams from Mathematics II (level A and B) will be organized in the same way as in Mathematics I. There are several necessary conditions to be fulfilled by students in order to be admitted to the exam:

- Student must have a *valid assessment* from tutorials registered in the electronic system KOS. (students without valid assessment can't subscribe for the exam)
- Student has to *subscribe (register) in the KOS* system for the chosen date and level of the exam. (students who will be not subscribed for the exam in the [KOS](#) system can't participate in the exam)
- Student should come to the exam *in time*, i.e. he/she should be present in the examination room at least 10 minutes before the official start of the exam. (students who will come late, will be not allowed to participate in the exam)
- Student has to bring his/her *Student Identification Card*. (students will be not allowed to participate in the exam without presenting this card)

These conditions will be followed strictly, without any exceptions.

The detailed information will be made available at the end of semester in the *Notice of exams* from Mathematics II for the academic year 2019/20.

[Sample exam tests:](#)

Exam 1

,

Exam 2

,

Exam 3

Literature:

- Neustupa, J., Kračmar S.: Mathematics II, CTU Publishing House, Prague, 1996,
- Finney, R. L., Thomas, G.B.: Calculus, Addison-Wesley, New York, Ontario, Sydney, 1994
 - Functions of multiple variables pages_01-23
 - Implicit functions pages_24-33
 - Riemann integral pages_34-47
 - Double integral pages_48-56
 - Triple integral pages_56-69
 - Line integral pages_70-83
 - Surface integral pages_84-103
 - Potential and solenoidal fields pages_104-118

Examples:

The *Collection of examples from Mathematics II* written in Czech by authors E. Brožíková, M. Kittlerová and F. Mráz (2016) contains both examples and their solutions. Here you find several parts translated in English. The examples in English have the same numbering but they are without solutions (corresponding solution you can find in the Czech version, which is in the brackets). English translations will be added gradually. By the star (*) are denoted the examples, which go beyond the requirements of the exam this year.

- [Riemann integral](#) [[Určitý integrál](#)]
- [Calculus - part 1](#) (partial derivatives, ...) [[Diferenciální počet-část 1](#)]
- [Calculus - part 2](#) (gradient, differential, directional derivative, etc.) [[Diferenciální počet-část 2](#)]
- [Implicit Functions](#) [[Implicitní funkce](#)]
- [Extrema](#) [[Extrémy](#)]
- [Double integral](#) [[Dvojný integrál](#)]
- [Triple integral](#) [[Trojný integrál](#)]
- [Line integral](#) [[Křivkový integrál](#)]
- [Surface integral](#) [[Skalární](#)] [[Vektorový](#)]
- Divergence theorem [[Gaussova-Ostrogradského věta](#)]
